Professional Summary

Software developer with experience writing Rust smart contracts on Solana and building responsive web applications for blockchain projects and community-driven initiatives. Skilled in modern client-side technologies, animations, and client side Web3 integrations.

Technical Skills

Blockchain: Rust, Pinocchio, Solana, Anchor

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind, SCSS

Backend: Nest.js, Node.js, .NET

Database: PostgreSQL, Prisma, SQL

DevOps & Tools: Git, Docker, REST APIs

Professional Experience

solbound.dev — Software Developer

Oct 2024 – Present

- Developing Rust smart contracts on Solana using the Anchor and Pinocchio frameworks
- Built a token vesting contract enabling scheduled token distribution with configurable cliff periods and release schedules
- Developed a liquid staking program allowing users to stake tokens while maintaining liquidity through derivative tokens
- Created a mystery pack program for randomized on-chain token distribution
- Building client-side applications for Solana ID across web applications, dashboards, and identity-focused interfaces
- Built high-performance campaign pages for Solana ID, in collaboration with MetaMask, KAST and Solflare

- Developed web presence and client-side applications for BonkZ, a community-driven Solana project with a strong ecosystem presence
- Built web applications for Superteam Balkan – Startup Village, supporting startups, founders, and Web3 talent across the Balkan region

Superteam Balkan — Contributor

2024 – Present

- Active contributor to Superteam Balkan, the regional chapter of Superteam focused on growing the Solana ecosystem in the Balkans
- Participating in community initiatives, hackathons, and ecosystem development efforts
- Supporting onboarding of new developers and builders into the Solana ecosystem

DUMP Association of Young Programmers

Oct 2023 – Present

Software Developer & Project Manager (*Jun 2024 – Present*)

- Organization team for DUMP Days 2025, managing logistics, sponsor coordination, and partner requirements for one of Croatia's largest tech conferences
- Led full-stack development of the DUMP Days 2025 web and mobile application using React and NestJS, implementing features, backend services, and real-time functionality
- Coordinated cross-functional teams of designers, developers, and stakeholders to deliver project milestones on schedule
- Mentoring junior developers and interns in modern development practices

Intern (*Oct 2023 – Jun 2024*)

- Completed intensive full-stack development training with .NET, PostgreSQL, NestJS, and React
- Built web and mobile applications as part of hands-on project work
- Collaborated with senior developers on production codebases

Education

School of Electrical Engineering — Computer Science
